

Data Quarantine

Keep your sensitive data inside and control the outbound flow

It's a widely believed misconception that information quarantines are for safely storing harmful files until their extermination or until proved harmless. With Grayteq DLP Data Quarantine, you can build a multi-layered protective wall around your sensitive data and let the authorized users, devices, applications in while keeping the unauthorized or knowingly harmful ones out, allow seamless and uninterfered work for the authorized inside the quarantine and enforce on-premise policies to firmly control any outbound data movement, may it be a move, a copy, a send, a print, an upload, a download. You name your sensitive documents, protected storage locations, folders, desktop PCs, laptops or even servers and Grayteq DLP Data Quarantine protects them for you.

The well-known purpose with a twist

Grayteq DLP Data Quarantine's development purpose was to create a strong, Grayteq user authentication-based, freely configurable protection capability for sensitive data storing locations that are almost one-click manageable by the organizations' IT professionals with almost no effort and using Grayteq Security Orchestrator's drag-n-drop policy application scheme, allow Grayteq DLP Agent's a strong, well-designed and easy-to-enforce data protection layer.

Manageable by users with no elevated rights

Data quarantine policies can be easily configured to make them useable, apply-able and manageable for the standard corporate users with no any prior special IT or IT security training. When you can allow a security policy enforcement capability for a standard user that can be simply activated and applying by following a folder naming convention, then burden of protecting valuable data can easily get off of the shoulders of your corporate IT people. Naturally, with Grayteq DLP administrator rights, all user-manageable quarantine policies can be overruled. Just for safety's sake!

Key Advantages

- Individual protection for all information within the protected space by setting up access-, use-, transfer- and print rules for users, user groups and applications;
- Protect your data with Grayteq Encryption within the quarantine space automatically.
- Set locations for each quarantine, where its protection shall apply.
- Control who shall enter the quarantine space, with what application, what they can do within and where they might take data out.
- Protect quarantined data againsts screenshot.
- Receive real-time alert for any quarantine breaching attempt.

Grayteq DLP Features

 DLP Monitor

 Rights Management

 Data Quarantine

 App Management

 Endpoint Protection

 Encryption for DLP

 Intrusion Prevention

 Report & Audit

Powerful in itself, easy-to-combine

Grayteq DLP Data Quarantine is capable of protecting your sensitive corporate data against being accidentally leaked or intentionally stolen on its own. But combined with other Grayteq DLP protection features like Endpoint Protection, Data Encryption, Host Intrusion Prevention and Access Rights Management, your IT security steps a great forward to the complete and single pane of glass data protection, managed from the single console management software, Grayteq Security Orchestrator.

From general use to the most purposeful setup

Data Quarantine rule and it combined with another quarantines or or other types of Grayteq DLP rules can help you translate even your most complicated and specific data security needs of your organisation into a highly tailor-made and purposeful security policy that might be adjusted to fit even the most complex workflows. This granular but very generous flexibility makes Grayteq DLP Data Quarantine capable of rather adjusting to your users' existing way of daily work with the least possible enforced changes while with the highest efficiency in protection your sensitive data.

Evidence, report and real-time alert in clicks

Blocking any attacks on your corporate data is just half of protection, while immediate reporting and real-time alerting make it a whole. You can setup your Grayteq DLP Data Quarantine to alert your designated IT security professionals with all details of the breaching attempt when the attacking action is blocked. With Grayteq DLP Agent's built-in user notification engine, the accidental or intentional perpetrator user may also be informed with only the main details of the breaching attempt in a form of a Grayteq DP designed notification pop-up. During the logging of the specific attack, Grayteq DLP Data Quarantine may create and lock a comprehensive screenshot about the perpetrator's screen to the evidential logs. And we all know what they say about a picture and thousand words.

Central management by Grayteq SO

Grayteq DLP's single console management software Security Orchestrator consolidates and centralizes application management, providing a global view of your enterprise data security. This management platform integrates Grayteq DLP Data Quarantine with all other Grayteq DLP components. Single-step installation, update and deployment of Grayteq DLP can be done from Microsoft System Center as well.

Conclusion

Flexibility, purposefulness, powerful enforcement engine, all-aspect-protected infrastructure, centralized management, easy-to-combine for advanced policy setup, user manage-ability, automated breaching attempt alert and many more make Grayteq DLP Data Quarantine is one of the finest protection for your data to stay within the corporate perimeter.

About us

Grayteq was born from a firm commitment to provide superior data security products to companies and people all over the world. Since its inception, our company has passed down and expanded on its traditional strengths as an IT security software manufacturing company. Grayteq's approach to data loss prevention massively differs from any other data loss prevention manufacturers' approach in numerous aspects. Our slogan well represents our way of thinking about data loss and applicable prevention measures to stop it.
