

Grayteq Dashboard

A supervised system is a well-managed system

Today's IT environment is expanding with more and more connected devices, physical or even virtual subsystems creating numerous, previously not existing and unknown endpoints. Within this increasingly complex environment, previously disparate roles are beginning to merge. For instance, although a security manager may still be responsible for identifying new data leakage threats and report to the top management, but a security manager cannot sit twentyfour-seven in front of a real-time logging system, chasing threats and create reports. There is, why security personnel are authorized to do this part of the security manager. As responsibilities merge, organizations are looking for a simplified, integrated way for a central insight system to identify and react on threats in real-time and create executive reports by a single click.

Insight as never before

Grayteq Dashboard is the executive reporting tool of Grayteq DLP Management Suite and as it is, enhances built-in reporting and insight capabilities of the DLP member of the management suite, Grayteq DLP.

Would you know if:

- Illegal intrusion breach occurs on a management mobile device?
- There are unmanaged hosts in your IT system?
- Security system licenses are expired?
- You have a peek of security breaching employees?
- High-severity classified breaches occur in your system?
- Some of your business-critical storing servers has out-of-date security policies?

Features

Computers & Licenses

Summarize and manage your Grayteq DLP system, monitor currently managed and unmanaged hosts, get in the know of out-of-date and expired hosts, license expirations and renewals.

Alerts & Offenders

Check your DLP Alert summary that contains all logged and blocked Events, Quarantine, Removable Media, Event Control, Intrusion Control and Storage related alerts. Know your highest offenders, users or hosts.

Incident overview

Incident overview shows you charts, statistics and diagrams of incidents by severity or type, such as computers over event threshold, most intrusion endangered hosts, application interaction breaches, storage-, removable media and quarantine breaching attempts.

Policy summary

Policy summary lets you know if there are computers that differ from corporate policy, with out-of-date Grayteq Clients installed or with errors. Check all types of assigned and non-assigned rules to keep yourself up-to-date in upholding and forthcoming policy settings.

The Grayteq name, logo, Grayteq DLP and all other Grayteq products named herein are either registered trademarks or trademarks of Sealar Incorporated in the United States and/or other countries. Other names may be trademarks of their respective owners.

All information provided is subject to change without notice. Errors and omissions excepted.

Server status overview

Get real-time status report of your Grayteq Security Servers, or any supported third-party security database servers like Microsoft SQL, PostgreSQL, Oracle and SYSLOG.

Reporting summary

Review your ad-hoc and automated reports and alerts set in your system with information about their last run and the schedule of the forthcoming ones.

About us

Grayteq was born from a firm commitment to provide superior data security products to companies and people all over the world. Since its inception, our company has passed down and expanded on its traditional strengths as an IT security software manufacturing company. Grayteq's approach to data loss prevention massively differs from any other data loss prevention manufacturers' approach in numerous aspects. Our slogan well represents our way of thinking about data loss and applicable prevention measures to stop it.
